

Engaging citizens,  
business & government  
to protect our waterways,  
ensuring safe  
**Clean Water** in Alabama.

See what you can do.

**The mission of Clean Water Alabama** is to engage and encourage the citizens of Alabama to take the necessary actions to ensure that our water resources (rivers, streams, lakes, bays and Gulf Coast) are protected from those items that make them unsafe to its citizens, their communities and the plant and animal life that live within and around.

So much of Alabama the Beautiful centers around our water resources. The rapid growth and development in Alabama, in particular its southern counties, threatens our waterways like no other time in our history and has already begun to make many of our waterways and bodies of water unsafe. We each share in the responsibility of doing something about this. Collectively we can make a difference in making our waterways cleaner and in ensuring their preservation for generations to come.

**Alabama has some of the most** diverse river, bay and gulf water systems in the world and we are responsible for overseeing and protecting the natural qualities of our waters.

### **THERE IS MUCH TO DO!**

Over time, sediment has filtered into our rivers and bays. We need to do our part to reverse what's taken place. As others visit our beautiful state, growth is placing a strain on our waterways in terms of pollution and water quality.

### **WE ALL NEED TO WORK TOGETHER.**

Let's protect our water resources, as this is one of the most important issues our state faces both environmentally and economically. Visit our website to see what you can do to insuring we have *"Clean Water in Alabama."*
